

SAHEEL AHMED

AI SOLUTIONS ARCHITECT · FORWARD DEPLOYED ENGINEER · GENAI & ENTERPRISE AI
Dubai, UAE / India · +971 56 595 2324 · +91 99451 17872 · saheelahmed7@gmail.com · linkedin.com/in/saheel-ahmed

PROFILE

AI Solutions Architect and hands-on technology leader with 18+ years building and deploying mission-critical systems across PropTech, government, banking, fintech and enterprise environments. Specialises in Generative AI, LLM integration, RAG architectures, AI agents, workflow automation and enterprise API integration. Known for entering ambiguous client environments, translating business problems into production architectures, writing critical-path code, and carrying executive and government stakeholders through deployment and adoption.

CORE SKILLS

AI & GenAI	LLM integration, RAG architectures, AI agents, prompt engineering, embeddings & vector search, NLP, OpenAI, Gemini, Hugging Face, TensorFlow, ML.NET
Automation	n8n, Make, Zapier, API orchestration, webhooks, event-driven & batch processing, WhatsApp Business API, CRM integration
Architecture	Enterprise & solution architecture, system design, microservices, REST & GraphQL APIs, cloud-native design, legacy modernisation
Backend	Python, FastAPI, Flask, C#, .NET Core, ASP.NET MVC, Node.js, Express, Knex
Frontend & Mobile	Vue.js, Quasar, Angular, React, Ionic/Capacitor, MAUI, Blazor
Data	PostgreSQL & pgvector, Supabase, MS SQL Server, MySQL, MongoDB, CouchDB, Redis
Cloud & Hosting	Azure, AWS, GCP, Oracle Cloud, Alibaba Cloud, Vercel, Netlify, Cloudflare (Pages, Workers, DNS/CDN)
DevOps	Docker, Kubernetes, CI/CD, GitHub Actions, Nginx, Apache2, IIS, edge deployment & CDN configuration
Client-Facing	Forward-deployed delivery, executive & government stakeholder management, discovery & scope negotiation, technical leadership, mentoring

EXPERIENCE

Chief Technology Officer (Hands-On) PropMatch LLC	Dubai, UAE · 2021–Present
<i>Owns the AI, automation, integration and cloud roadmap for a PropTech platform; architects and writes critical-path systems while leading a 6–20 person engineering team.</i>	
AI lead-matching engine — designed and implemented an AI-driven engine connecting agents with high-intent buyers, lifting conversion 30%; integrated LLMs for automated property descriptions and production support chatbots. Enterprise automation — architected end-to-end n8n workflows across CRM, WhatsApp Business API, internal databases and webhooks; cut manual data entry 40% and reduced lead response time from hours to seconds. Cloud delivery — re-architected deployment and delivery pipelines, reducing operational cost 15% while sustaining 98% on-time delivery across 50+ concurrent client projects. Stakeholder engagement — primary technical interface for government and public-sector stakeholders, presenting architecture, compliance posture, rollout plans and risk to secure adoption. Leadership — built and mentored a 6–20 person engineering organisation while remaining hands-on with architecture and critical-path production code; 95% client satisfaction.	
Solution Architect & Full-Stack Lead Mint Middle East	Dubai, UAE · 2018–2021
<i>Client-facing architect embedded in fintech and eCommerce environments, building high-throughput, integration-heavy systems under banking-grade constraints.</i>	
Government AI deployment — led development of a TensorFlow plant-disease detection system for the Abu Dhabi Agriculture & Food Safety Authority, working alongside government technical teams to put a production AI model behind national food-security objectives.	

- **Payments architecture** — designed and built a closed-loop QR payment system for UAE retailers including GoMart and Global Village inside existing banking infrastructure — thousands of daily transactions, sub-second latency, zero disruption to live systems.
- **Banking integration** — built middleware unifying multiple payment gateways and banking APIs into a single transaction flow, reconciling conflicting provider data contracts.
- **Financial automation** — engineered .NET Core and Python background services for automated reconciliation and data synchronisation, cutting manual processing time 50%.
- **Microservices** — delivered high-availability microservices for AISofra and Omla, integrating live third-party banking APIs and enterprise systems.

Managing Partner & Full-Stack Architect | Digists

Mysore, India · 2015–2018

- Delivered bespoke ERP and CMS solutions on client sites, automating core business processes with .NET and Python.
- Led headless CMS adoption (Strapi, Umbraco) and ran the migrations that improved content delivery performance.

Technical Head & Senior Developer | Radical Thinking / G5 Systems

Dubai, UAE · 2012–2015

- Led modernisation of legacy POS and inventory platforms using API-first architecture, enabling mobile application integration.
- Managed a 5-developer delivery team while building automation tooling for testing and deployment.

Software Engineer & Consultant | Qwinix · BLS Software · Veriton · Torus Solutions

India & UAE · 2005–2012

- Built a high-volume code-generation engine for P&G's loyalty program handling 6 billion unique codes with sub-second response time.
- Delivered systems across banking, healthcare, education and enterprise — Microsoft Faculty Resource Center, AMG National Bank portal, Sling TV, International HUB and Western Union engagements.

Lab Programmer | Farooqia Polytechnic

Mysore, India · 2007–2010

- Taught and supervised computer science laboratory subjects and student projects; recognised with a Best Lecturer award.

SELECTED AI WORK

Enterprise RAG & Agent Platform | Personal build · Python

Demo available on request

- Built an end-to-end retrieval-augmented generation and agent platform in Python (~3,200 lines): document ingestion and chunking, embedding generation, vector retrieval, tool-calling agent orchestration, and an evaluation harness for answer grounding.
- Designed as a working, screen-shareable system rather than a slideware demo — architecture decisions, failure modes and retrieval trade-offs can be walked through live.

Retrieval Chatbot on n8n | Supabase / pgvector · Google Gemini

Production workflow

- Built a document-grounded chatbot as an n8n workflow: recursive text splitting, embeddings stored in Supabase pgvector, semantic retrieval with a similarity threshold to suppress low-confidence answers, and Gemini for generation.
- Deployed as a reusable pattern for SMB clients — knowledge-base Q&A delivered over web and WhatsApp with no bespoke backend.

Jobhyr — Bilingual MENA Job Marketplace | Technology Partner / CTO

2025–Present

- Co-founding technical partner on a bilingual (Arabic/English) job marketplace; owns platform architecture, AI matching and delivery from zero to launch.

EDUCATION

B.E. Computer Science | Visvesvaraya Technological University

2006–2009

Diploma in Computer Science | D. Banumaiah's Polytechnic

2003–2006

RECOGNITION

Best Performance Award · Best Front-End Developer · Best Website Award · Best Lecturer
